

# Take Home Messages 2024

1. Frailty is highly prevalent
2. GA has many positive effects (QoL, AEs, sharing decision, conversation)
3. Nuances in Tx & strategies are very frequently needed (duration, simple/single)
4. Optimize Tx according to both tumour biology and patient's level of frailty

## Love and frailty and an avalanche of missteps

Lodovico Balducci MD

1. Older patients need to have their health problems dealt with sequentially and right away: treatment delayed is treatment denied
2. Doctors need to find a way to make sure that simple remedies are not overlooked
3. Doctors must learn to recognize that even healthy and vigorous older patients can be frail

- Feedback form and certificate of attendance

- Flowers

- Awards
